ICE Technology*

- T2 Temperature Range without Derating
- 120°C Maximum Case Temperature
- -45°C Minimum Temp.
- EN 50155 Certified
- EN 50121-3-2 Certified
- CE Marked
- 24, 48 and 110VDC Input Ranges
- Six Sided Shielded Enclosure
- Baseplate Case Style
- Efficiency to >89%
- Low Quiescent Current

Description

The RPR50 series DC/DC converters are designed for railway rolling stock applications. Besides covering all the input voltages from 24VDC up to 110VDC, the converters have a very wide operating temperature range of -45°C to +120°C. The RPR50 has a baseplate case for high vibration or bulkhead-mounting applications. It is EN 50155 and EN 50121-3-2 compliant.

Notes :

- The ON/OFF pin voltage is referenced to negative input. The pin is pulled high internally. ON/OFF control is standard with positive logic: e.g. RPR20-2405S, RPR20-4805D-B. Positive logic: 0= OFF, 1 = ON. The converter will be ON if the CTRL is left open.
- To ensure a good all-round electrical contact, the baseplate is pressed firmly into place within the aluminium housing. The hydraulic press can leave tooling marks and deformations to both the housing and baseplate. The case is anodised aluminium, so there will be natural variations in the case colour and the aluminium is not scratch resistant. Any resultant marks, scratches and colour variations are cosmetic only and do not affect the operation or performance of the converters.
- The converter is supplied with a protective adhesive tape to keep the top surface clean. The tape is heat resistant and the converter can be soldered into place without removing the tape. The tape should be removed just before final installation.
- The RPR series are optionally available with a ribbed heatsink case style. They will then meet Tx requirements without an external heat-sink. Please contact your RECOM supplier for more information.

Input Fuse is recommended.
Recommended fuse rating = double maximum input current, time delay type.

To ensure optimum thermal performance, use large areas of copper on the PCB to assist with heat dissipation and mount the converter vertically.
